

PFAS Declaration

We refer to your request concerning the ban on PFAS in certain American states, and to the new European regulation PPWR 2025/40, which stipulates that from August 12, 2026, packaging intended to come into contact with foodstuffs may no longer be placed on the market if it contains a concentration of PFAS equal to or greater than the limits defined in this same regulation. We would like to confirm that we are fully aware of the entry into force of these new regulations, and that we have been working for several months on what is needed to adapt to this new regulatory constraint.

These substances are authorized for food contact materials under the applicable laws and regulations, comply with European regulations according to the Echa list of June 14, 2023, and do not contain the type of perfluoroalkyl carboxylic and sulfonic acids that are of greatest concern to the authorities.

We have carried out extensive work and to date validated PFAS NIA (Non-Intentionally Added) solutions for all our raw materials and all the packaging we use for our products.

Based on the information available to us, Amcor Capsules can confirm that PFAS substances are Not Intentionally Added in our raw materials purchased nor added during manufacturing process.

Based on **testing of relevant samples our product is in compliance** with the limit of **Article 5 of the European regulation PPWR 2025/40** point 5(c); a method to test for the limits in points 5 (a) and (b) does not yet exist.

We cannot exclude the presence of traces of impurities at insignificant levels resulting from accidental contamination or impurities in the precursors of our raw materials.

We remain at your disposal.

Sincerely,

Saint Seurin sur L'Isle, 30th January 2026

Christophe GOBINAUD
Capsules Quality & ETS Manager
